
ABSTRACT

1
2 A U-shaped device with two arms and a base. The member is formed of a U-shaped
3 channel of plastic, overlaid exteriorly with a layer of padding, which may be of neoprene.
4 Preferably, the opening at the front of the channel is slightly less than the opening at the base of
5 the channel between the two arms. The device is adapted to fit over the edge of a table such as
6 a commercial folding table to provide forearm comfort and cleanliness for bingo players by
7 helping the forearm to avoid chemical residue, splinters, dirt, cigarette sears and the like.
